

969 nm 140 W Wavelength-Stabilized Fiber Coupled Laser Diode

K969BN1RN-140.0WN0N-10522F20EF

Features:

- 969±1 nm wavelength
- 140 W output power
- 105 µm fiber core diameter
- 0.22 NA
- 1020nm~1200 nm feedback protection

Applications:

- Fiber Laser Pumping
- Solid-state Laser pumping
- Scientific Research

(1) Data measured under operation output at nominal output power@25°C.

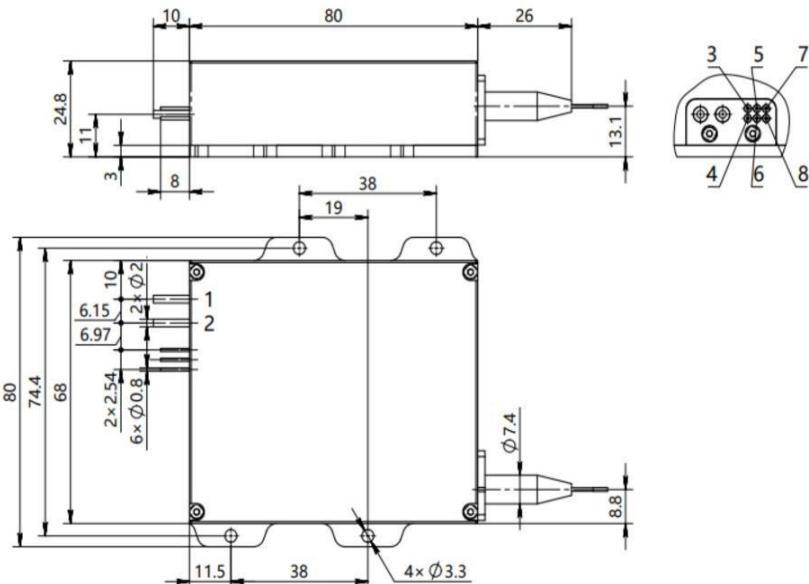

(2) A non-condensing environment is required for operation and storage.

(3) Operating temperature defined by the package case. Acceptable operating range is 25±2°C, but performance may vary.

OPERATING NOTES

- Avoid eye and skin exposure to direct radiation during operation.
- ESD precautions must be taken during transportation, storage, and operation. A short-circuit connection is required between pins during transportation and storage.
- For lasers with operating currents above 6A, connect leads by soldering. The soldering point should be as close to the middle of the pins as possible, with a temperature below 260°C and a soldering time of less than 10 seconds.
- Before operating the laser, ensure that the fiber output end is properly cleaned. Follow safety protocols when handling and cutting fiber to avoid injury.
- Use a constant current power supply and avoid surges during operation.
- Operate within the rated current and power levels.
- Ensure proper cooling during operation.
- The operating temperature range is 23°C to 27°C.
- The storage temperature range is -20°C to +70°C.
